

Peratec Fungicide-Potatoes

Blight, Fusarium, Soft Rot, Phoma

Peratec Fungicide utilizes per oxygen chemistry that is specific for agricultural field crops as well as greenhouse productions and post harvest storages. This is a new tool to fight against disease caused by micro-organisms that will not harm the environment or pose risk to human health and safety. It is a clear non- foaming biodegradable Fungicide for use on seed and foliage, extremely effective as a fungicide on Fusarium, Tuber rot silver scurf and Phoma at a dilution rate of 1:100.

Benefits:

- Extremely effective against a wide range of contaminants including Aerobic and Anaerobic bacteria, spores, yeast, mould, fungi and other viruses.
- Particularly effective in controlling the growth of organisms which are propagated by spores, and can be advantageously be used in control without resulting in the evolution of a resistant strain of the organism.
- Minimal contact time required 10 to 30 minutes depending on the degree of infection.
- Optimum efficiency obtained at a dilution rate of 1:100 to 1: 500.
- Contains no surfactants.
- Safe on stainless steel plant and equipment.
- **Non-Residual**, Plants can be sprayed right up to harvest date, leaves no lingering taste or smell..
- Spray volume 600-1500L/hectare. **or to run off**
- Cost effective in use, 2.5/L of Peratec Fungicide to 500L of water.
- Environmentally friendly.
- Not phyto-toxic
- Ideal for disinfecting equipment to avoid spreading of infection.

Directions for Use

Fusarium	1:100	5L Peratec Fungicide per 500L of water; apply 250-500L of spray solution per acre.	Curative: Spray diseased plants using a 1:100 rate and continue treatments should infection re-occur.
Bacterial soft rot.			
Silver Scurf			
Blight		2.5-5L PeratecFungicide per 500L of water; apply 250-500L of spray solution per acre.	5.0L Peratec Fungicide per 500L of water; apply 1500L of spray solution per hectare. 2.5-5.0L Peratec Fungicide per 500L of water; application rate 600L to 1000L per hectare
